

North Branch Fire District

Working for a cleaner environment and a better community

The North Branch Fire District #1 was chartered to provide West Dover with a modern system to dispose of sewage for the community.

Our goals are to reduce water pollution; to provide the means to abate present sewer pollution and to prevent new sources of pollution; to service by municipal sewerage collection, expansion and growth in the Fire District and increased skier demands; to adopt an orderly and systematic phasing of existing sewer pollution abatement and prevention of future sources of pollution; to allocate the use of existing excess treatment plant capacity to enable improvement; to preserve, repair, upgrade and remodel a treatment plant and its facilities in order to attain and retain its designed capacity, and to do what is lawful in increasing its capacity to meet growth and additional demands.
